1. Configure network card IP

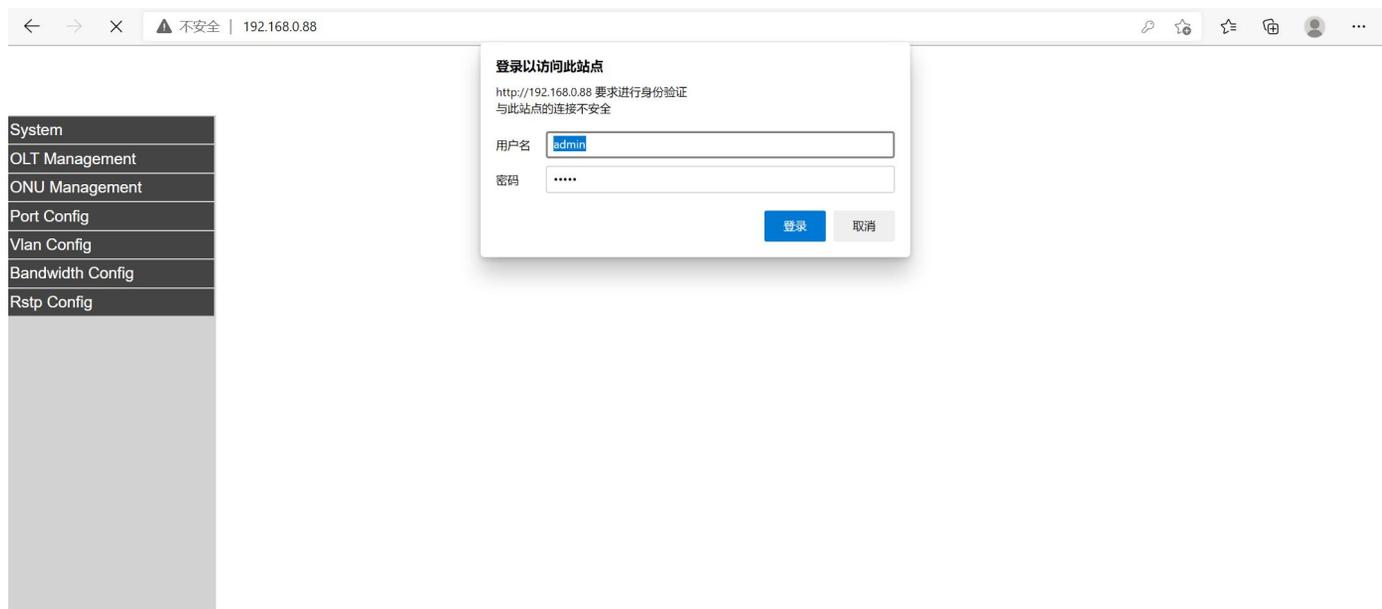

OLT default IP is 192.168.0.88. Change the host IP to 192.168.0.X (X cant be 88) ; Subnet mask:255.255.255.0, gateway:192.168.0.1

2. web login

Open a browser, input 192.168.0.88 (ping 192.168.0.88 if success before login)

Account:admin password:admin

3. System management

3.1 System Info

Check system name, software version, MAC, IP, operating time.

Change system name, system description, system address.

The screenshot shows the 'System Information' page in the EPON Management System / OLT interface. The page has a blue header with the title 'EPON Management System / OLT', a language dropdown set to 'English', and a login status 'Login: admin / Administrator | Logout'. On the left is a navigation menu with 'System' selected. The main content area displays a 'System Information' table with the following data:

System Information	
System Name:	unknown
System Description:	unknown
System Address:	Earth
Switch Type:	OLT
Software Version:	v7.52
Revision:	Release20210827
MAC Address:	78:5c:72:a3:25:76
IP Address:	192.168.0.88
Run Time:	0 hours 0 minutes 53 seconds
CPU Usage:	0%
DRAM Memory:	44.26%

Below the table are 'OK' and 'Refresh' buttons.

3.2 Administrator

Create Administrator account, set authority

The screenshot shows the 'User List' page in the EPON Management System / OLT interface. The page has a blue header with the title 'EPON Management System / OLT', a language dropdown set to 'English', and a login status 'Login: admin / Administrator | Logout'. On the left is a navigation menu with 'Administrator' selected. The main content area displays a 'User List' table with the following data:

Index	User Name	User Group
0	admin	Administrator

Below the table are 'Add', 'Delete', and 'Refresh' buttons.

3.3 Network config

Change OLT management IP, add VLAN. If add management VLAN, need to connect the management port to the switch, and config management VLAN to trunk port and access port.

3.7 System log configure

Mainly configure the log server IP, after configured, the system log will auto upload to the log server.

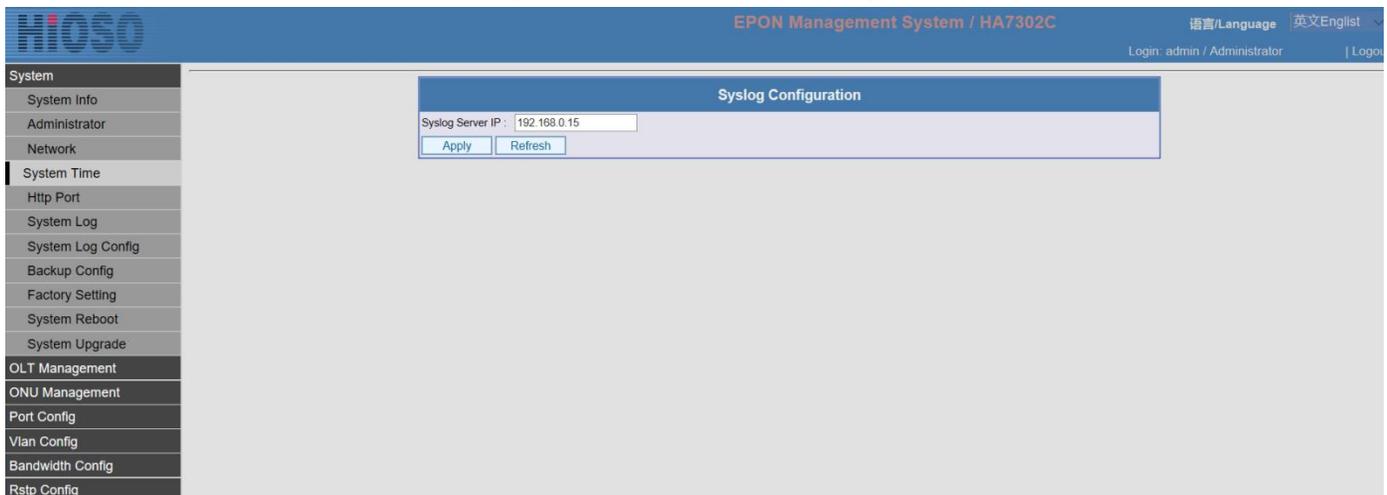

Firstly, install the log server.

3.8 Change web port number

Default port of web access is 80, it is ok to change this port number.

To telnet access the OLT through internet, need to do port mapping at the router (which is connected to the OLT for internet input). Mapping the public network IP to the OLT management IP and port number 80. If the port number 80 changed to other number, mapping to that port number for telnet access.

3.9 Backup Configuration and import

Backup the configuration and save.

Import the the configuration file and implement.

3.10 System Reboot

When meet problems, try reboot the system.

3.11 System upgrade

Choose the update file===» execute

When you see upgrade success, reboot the OLT.

Check the OLT version before upgrade, after upgrade, check if OLT version changed.

Note: Don't power off.

4. ONU Management

4.1 Check the ONU registered,optical power, reboot ONU etc.

Check the ONU online status,version,chip set,and port number

If the online ONU can be seen the chipset type, it can get internet; if the chipset type 0000, the onu status is abnormal, can't get internet.

PON 0/1/1 ONU List							
Id	Name	MacAddress	Status	Version	ChipID	PortNumber	
0/1/1:1	NA	78:5c:72:70:3e:8a	Down	0101	9125	2	

6. Statistic

Check the data flow statistic of PON port, uplink ports, ONU link. This to check if there are online users under the ONU. The statistic is changing, means there is online user.

EPON Management System / OLT Language English
 Login: admin / Administrator | Logout

OLT Port Statistic										
Port Id	RxPkt	RxUnicast	RxBroadcast	RxMulticast	TxPkt	TxUnicast	TxBroadcast	TxMulticast	CrcError	Dropped
PON0/1/1	0	0	0	0	0	0	0	0	0	0
PON0/1/2	0	0	0	0	0	0	0	0	0	0
GE0/1_1	0	0	0	0	0	0	0	0	0	0
GE0/1_2	0	0	0	0	0	0	0	0	0	0

7. VLAN Configure

Follow the below steps to set VLAN:

Transparent mode (no matter the data from the Ethernet port with or without VLAN tag, it can pass)

Tag mode (the data will add vlan Tag, the data with Tag will be forwarded with tag removed)

Translate mode (eg, the data with VLAN 200 will change to VLAN100)
